Restroom upgrades start with partitions that are ***built to last*** and ***designed to impress***.

We provide a full range of materials to meet the needs of every space—whether your priority is **durability, aesthetics, hygiene, or budget**.

Powder-Coated Steel

A smart balance of strength, value, and versatility. Available in a wide range of colors, powder-coated steel partitions provide a cost-effective solution for everyday restrooms without sacrificing style.

Plastic Laminate

Offering the broadest design flexibility, plastic laminate partitions come in countless colors and patterns. They're best suited for low- to medium-traffic restrooms where design is as important as function.

Solid Plastic

Engineered for high-traffic environments, solid plastic partitions are waterproof, graffiti-resistant, and virtually indestructible. They will never rust, chip, or delaminate—making them a top choice for schools, YMCAs, and recreation centers.

Phenolic Core

When performance matters most, phenolic core delivers. With exceptional impact resistance and the ability to withstand moisture and heavy use, they're perfect for hospitals, laboratories, and fitness facilities.

Stainless Steel

For a clean, modern look, stainless steel partitions combine sleek design with outstanding durability. Resistant to corrosion and easy to sanitize, they're ideal for airports, office buildings, and other high-profile spaces.

No matter the material, our partitions are professionally installed and designed to ***simplify cleaning, reduce maintenance, and maintain a polished appearance*** for years to come.

Upgrade with partitions that are ***durable, attractive, and built for every environment.***
